AnyPlace

Teridion Anyplace

Is a high-performance, secure remote connectivity service designed for the hybrid employee workforce.

Connecting a Hybrid Workforce

Today's workplace network is more complex than ever. The challenge of connecting work-from-home and remote employees to on-prem and cloud-based resources while working from unsecured public and/or home network with no SLA and connection quality guarantee has IT teams looking for solutions.

IT teams have deployed several tools to meet these challenges. VPNs, remote desktops, and zero trust network access (ZTNA) overcome many issues relating to security and accessing servers or applications, but don't address internet connectivity, **which can oftentimes be unstable and slow.**

Teridion's patented technology utilizes machine learning and artificial intelligence to find smart connectivity routes With Teridion AnyPlace, we ensure remote users remain productive through a unique network setup regardless of where they are working from. Teridion AnyPlace is the optimal complementary solution to accelerate VPN gateways and cloud-based workloads, with simplified configuration and fast, easy setup.

AnyPlace Solution
How It Works?

The service allows end-user devices to automatically select the best available Teridion PoP via an IPSEC tunneling protocol without any user interaction. AnyPlace by Teridion relies on the Teridion's powerful network of multiple cloud providers, with over 500 PoP's around the globe.

Management Portal

AnyPlace's portal management for IT teams Eliminates all compatibility and management issues, as well as any dependencies AnyPlace can be a managed or self managed service, either through Teridion's cloud based portal or over API.
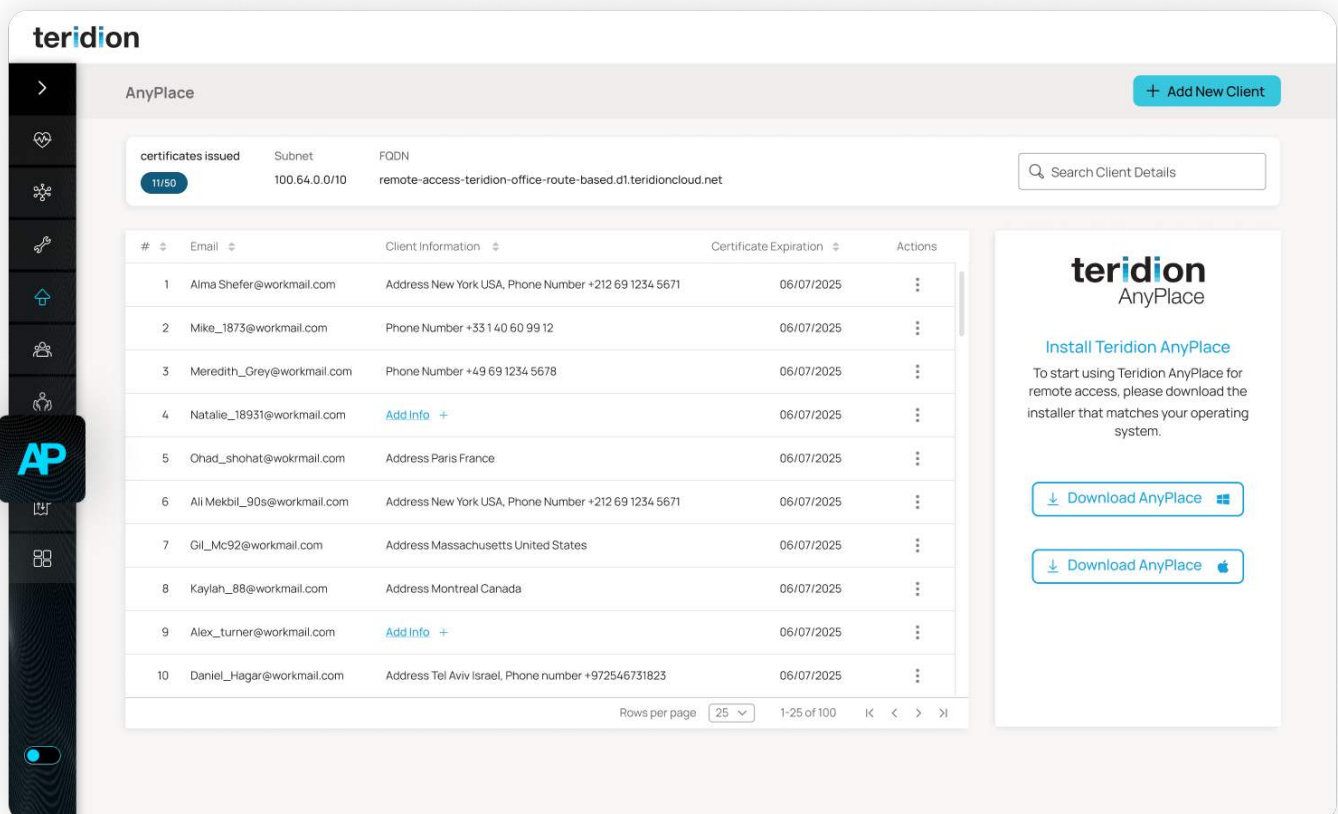

Optimal User Experience

Teridion AnyPlace was designed with end-user simplicity in mind.

Clients' Transparent Service

The service is fully transparent to the user, enabling them to experience a superior internet connection.

SLA Backed Secure Remote Connectivity

End users connect remotely to their enterprise applications and resources regardless of their location, through a secure, SLA-backed connection.

Security And Privacy Compliance

- SOC2 Type 2 compliance

- NOC 24/7/365 inspection

- OWASP Top-10 2021 defense updates

- NGFW implementations

- GDPR compliant

Technical Specification

Operating systems	Compatible with Microsoft Windows, macOS, iOS, and Android
Encapsulation	IPSEC. 'IKE v2'
Layer-3 Encryption	3DES, AES-128, AES-192, AES-256, AES-128 GCM, and AES-256 GCM
High-Availability	Client's connection failover by Teridion FQDN record

About Us

Teridion is an AI-WAN solution that delivers fast and flexible global network connectivity. Our machine learning algorithm determines routing in real-time and optimizes for latency, jitter, and throughput so your teams can work together like they're in the same room — even from across the globe.

Try Teridion today and get high-performance connectivity to support smarter digital transformation for your organization.
